

MILWAUKEE⁷ PARTNERS IN GROWTH

KENOSHA | MILWAUKEE | OZAUKEE | RACINE | WALWORTH | WASHINGTON | WAUKESHA

Milwaukee 7 (M7) builds capacity for economic growth in the region through its initiatives and events, integrating strategies with partner organizations.

M7 convened more than 150 individuals and organizations – public and private – to develop the Milwaukee 7 Framework for Economic Growth. These strategic initiatives are a direct outgrowth of that business plan.

Helping grow your business

Milwaukee 7 staff and their counterparts in local economic development organizations throughout the region regularly survey and visit companies to discuss business challenges and expansion opportunities.

M7 can then connect companies to resources, including:

- Talent sourcing
- Real estate/location optimization
- Financing options
- Business incentives
- Market expansion

Attracting new companies

M7 markets the region to companies looking to expand operations or relocate – from across the state line to around the globe. We provide the tools and the project management to guide companies from their first visit through the opening of their new plant or office. We have successfully closed deals with companies around the country and attracted foreign direct investment (FDI) from companies in China, India, Great Britain, Spain, Italy and Germany.

Building the talent pipeline

The M7 Talent Partnership is aligning talent resources with high-growth industry clusters and is developing a stronger, more agile workforce that is a competitive advantage for individual businesses and the region.

Addressing immediate talent needs: When a company expands or relocates to the region, finding workers can't wait. The Talent Partnership can help companies navigate the agencies, staffing companies and college connections best suited to their industry and business.

Developing the pipeline: The M7 "Grow Here" campaign facilitates career-based learning experiences for students so they are better prepared to enter and succeed in the workforce.

The initiative connects businesses, students, educators and community organizations through a web-based platform and creates opportunities for career coaching, plant tours, apprenticeships and more.

Manufacturing Talent Initiative: M7 is bringing together manufacturing leaders to work on long-term solutions to the advanced manufacturing talent gap.

Advancing industry clusters

The Milwaukee Region is a recognized center of innovation and advanced manufacturing. Several industries stand out for the number of firms located here and the concentration of talent.

M7 supports these cluster industries and their network organizations.

The Mid-West Energy Research Consortium (M-WERC) is focused on the growth and economic competitiveness of the Energy, Power & Controls Industry cluster across the Midwest.

m-werc.org

FaB Wisconsin is the state's industry cluster organization for food, beverage, ingredient, equipment and packaging makers. FaB helps its members attract talent, increase innovation, ensure food safety and start or expand a business.

fabwisconsin.com

The Water Council drives economic, technology and talent development to support the global water industry.

thewatercouncil.com

The Next Generation Manufacturing Council serves as an epicenter for manufacturers to address issues common to the cluster industries, including workforce, exports, supply chains and productivity.

Increasing exports

Companies that export are driving top line economic growth. Exporters enjoy higher revenues, tend to grow faster and become more innovative.

Export Grant Program: Through grants from JPMorgan Chase and the Wisconsin Economic Development Corp., M7 is helping companies start and expand their export programs. The grant provides matching funds up to \$5,000 for businesses to take advantage of opportunities in international markets.

In collaboration with the Brookings Institution's Global Cities Initiative, M7 developed the Global MKE Trade and Investment Plan, that combines export and foreign direct investment strategies into a single, coordinated plan that aligns international market opportunities.

Supporting entrepreneurs

Entrepreneurs generate new wealth. By starting a new company, an entrepreneur develops new products, services and innovations and creates new jobs. They are critical to the Milwaukee Region's long-term prosperity. M7 connects new and growing companies to the resources they need to take their business to the next level. M7's Marshalling Our Resources group is helping address the needs of entrepreneurs, finding access to capital and creating a digital platform to coordinate efforts.

The M7 Venture Capital Fund provides grants, loans and equity to emerging companies and high-growth start-ups and connects these companies to additional support resources. Supported by the Wisconsin Economic Development Corp. and the Milwaukee Economic Development Corp., the fund provides capital ranging from \$50,000 - \$125,000 to Southeast Wisconsin-based companies.
